REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior arts fail to teach a method of performing a binding assay by determining the number of magnetic particles bound to a substrate, the method comprising immobilizing a layer of molecules to a substrate; providing magnetic particles as labels; performing a reaction using the molecular layer so as to bind at least some of the magnetic particles to the substrate; determining the number of magnetic particles bound to the substrate by determining the difference in the resonant frequency of a tuned circuit when the substrate is exposed to a magnetic field and when the substrate is not exposed to a magnetic field generated by a coil; the tuned circuit is connected to a phase locked loop comprising a driver which generates a signal for driving the tuned circuit, and a phase comparator for determining the phase difference between the driving signal and an output signal obtained from the tuned circuit, the phase comparator being adapted to generate a difference signal representative of the phase difference, said difference signal being fed back to said driver so as to cause the driver to drive the tuned circuit to reduce the determined phase difference.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
